Docket No. 4339/4358I(CON) ENG0087-02CT (Patent)

Application No.10/810,195 Filing Date: March 25, 2004

Page 3

## **IN THE CLAIMS**:

- 1. (cancelled)
- 2. (previously presented) The method of claim 36 wherein the anchor layer is deposited by electric arc spraying a metal feedstock selected from the group consisting of nickel, Ni/Al, Ni/Cr, Ni/Cr/Al/Y, Co/Cr, Co/Cr/Al/Y, Co/Ni/Cr/Al/Y, Fe/Al, Fe/Cr, Fe/Cr/Al, Fe/Cr/Al/Y, Fe/Ni/Al, Fe/Ni/Cr, 300 series stainless steels, 400 series stainless steels, and mixtures of two or more thereof.
- 3. (previously presented) The method of claim 2 wherein the anchor layer comprises nickel and aluminum.
- 4. (previously presented) The method of claim 3 wherein the aluminum comprises from about 3 to 10 percent of the combined weights of nickel and aluminum in the anchor layer.
- 5. (previously presented) The method of claim 3 wherein the aluminum comprises from about 4 to 6 percent aluminum of the combined weights of nickel and aluminum in the anchor layer.
- 6. (previously presented) The method of claim 36 wherein the catalytic material is deposited on the anchor layer and comprises a refractory metal oxide support on which one or more catalytic metal components are dispersed.
- 7. (previously presented) The method of claim 36 comprising a substrate selected from the group consisting of metal substrates and ceramic substrates.

Application No.10/810,195 Docket No. 4339/4358I(CON) Filing Date: March 25, 2004 ENG0087-02CT (Patent)

8. (previously presented) The method of claim 36, claim 3 or claim 4 wherein the catalyst member is connected in the exhaust flow path of an internal combustion engine to provide an exhaust gas treatment apparatus.

- 9. (currently amended) The method of claim 8 wherein the metal <u>carrier</u> substrate comprises the interior surface of a conduit through which the exhaust of an internal combustion engine is flowed prior to discharge of the exhaust.
- 10. (previously presented) The method of claim 8 wherein the carrier substrate comprises a metal substrate.
- 11. (previously presented) The method of claim 8 wherein the carrier substrate comprises a ceramic substrate.

## 12. – 19. (cancelled)

- 20. (previously presented )The method of claim 46 wherein the at least two substrate regions of different substrate densities have thereon different effective loadings of the catalytic material.
- 21. (previously presented) The method of claim 36, 46 or claim 20 wherein the substrate is selected from the group consisting of foamed metal, wire mesh and corrugated foil honeycomb.

## 22. - 35. (cancelled)

36. (currently amended) A method for treating the exhaust stream from an <u>internal</u> <u>combustion</u> engine, comprising flowing the exhaust stream into contact with a catalyst member comprising:

Application No.10/810,195 Docket No. 4339/4358I(CON) Filing Date: March 25, 2004 ENG0087-02CT (Patent)

Page 5

a carrier substrate having an anchor layer disposed thereon by electric arc spraying; and catalytic material disposed on the carrier substrate; and

changing the shape of the catalyst member by conforming the shape of the catalyst member containing catalytic material by bending and/or compressing the catalyst member within an exhaust manifold or exhaust flow pipe.

37. (previously presented) A method according to any one of claims 36, 46 or 20, wherein the catalyst member is part of a motorcycle exhaust treatment apparatus.

38. (previously presented) A method according to any one of claims 36 or 46, wherein the catalyst member is part of a utility engine exhaust apparatus.

39. (previously presented) The method of claim 38, wherein the utility engine is part of a lawn mower.

## 40. - 45. (cancelled)

- 46. (previously presented) A method according to claim 36, wherein the carrier substrate comprises at least two regions of different substrate densities disposed for fluid flow from one region to the other; and the catalytic material is deposited on the at least two substrate regions of different surface area densities.
- 47. (new) The method of claim 36, wherein the catalyst member is in the form of a mesh.
  - 48. (new) The method of claim 36, wherein the catalyst is in the form of a foam.
- 49. (new) The method of claim 36, further comprising placing the catalyst member in a close coupled position.
